1 Resourceful Firm

179D - deduction for energy efficient real property

DHG's understanding of this complex topic allows us to effectively advise our clients as they make strategic decisions in maximizing the financial goals of their business.

DHG's comprehensive process identifies qualified energy-efficient components that may produce immediate tax deductions for private owners of commercial buildings placed in service from 2006 to 2016. We also work with architects, design firms and contractors to secure benefits from their involvement with government-owned buildings. Our cohesive, integrated team provides one point of contact to ensure a smooth process and professional advice. By teaming with an engineering firm, to thoroughly document the technical aspects of the energy efficient components we are able to simplify the process.

Section 179D benefits

- Up to \$1.80 per square foot in immediate tax deductions
- Deductions may apply to more than one taxable year
- State and local tax incentives or credits may be available
- In the case of government-owned buildings, the deductions may be allocated to the designer

Turn-Key Service Offerings

- Attention focused on maximizing deductions
- Experienced in energy efficiency calculations
- Extensive knowledge of federal, local and multi-state tax issues
